

The answer key is wrong. **Nobody checked.**

A second opinion on every
question, before the marks are in.

- Two models, neither sees the answer key
- Every answer has a receipt
- Stops and asks when the two disagree

Submitted on Devfolio

1. PROBLEM STATEMENT

The committee reads the paper. **Nobody re-solves it.**

When the answer key is wrong, every student loses that mark.

ONE QUESTION FROM OUR PUBLIC SAMPLE

Which data structure removes elements in first in, first out order?

ANSWER KEY

A • Stack

CORRECT ANSWER

B • Queue

Possible Key Error

Universities already vet exam papers by committee. SOURCE: UITM PROCEDURE PK009
Cekgu re-solves every question, in minutes, before a student does.

2. PROJECT OBJECTIVE

She reads three questions **instead of twelve.**

Two models read every question. She opens only the flagged ones.

ALL 12 QUESTIONS, NO ANSWER KEY

12

- 1 What is the time complexity of reading the element at a known ind...
- 2 Which transport protocol retransmits lost segments so that data a...
- 3 Which data structure removes elements in first in, first out orde...
- 4 In big-O notation, what does O(n) say about an algorithm?
- 5 Mutual exclusion, hold and wait, and no preemption are three of t...
- 6 Which layer of the TCP/IP model does HTTP belong to?
- 7 What does a primary key guarantee about a relational table?
- 8 What does a compiler do with a source program?
- 9 What is the main job of the Domain Name System?
- 10 Why does a processor have a cache?
- 11 How many bytes are there in one kilobyte?
- 12 What does creating a branch in Git let a developer do?

Possible Key Error
- 11 How many bytes are there in one kilobyte?

Possible Ambiguity

9 questions

Clear

3. OVERALL CONCEPT

Two models, no answer key, **one fixed rule.**

Compared to each other first. Only then to the answer key.

THE QUESTION AS SHE TYPED IT

Which data structure removes elements in first in, first out order?

The answer key is withheld.

TWO MODEL FAMILIES, NO ANSWER KEY

Reader A

Queue

=

Reader B

Queue

ANSWER KEY

Stack

CHECKED IN THIS ORDER

- 1

Unverified

fewer than two verified answers
- 2

Split Opinion

the two answers differ
- 3

Possible Ambiguity

both answers list more than one option
- 4

Clear

both answers match the answer key
- 5

Possible Key Error

both answers agree, and neither matches the answer key

3. OVERALL CONCEPT · THE PROOF

Every answer comes with a **GonkaRouter** request ID.

The gateway keeps the record, not us. No receipt, no reading.

PUBLIC SAMPLE RECORD · QUESTION 9 · READ 3 SEP

SERVED MODEL

MiniMaxAI/MiniMax-M2.7

REQUEST ID

OPEN IT YOURSELF

`api.gonkarouter.io/v1/receipts/req-1788427238422211326-414866`

No API key and no login. Anyone in this room can open it now.

Every question gets two of these, from two different model families.

4. TECHNOLOGY STACK AND TRACK CHOSEN

One server, one gateway, **two model families.**

Every model call leaves from one file. It only reaches GonkaRouter.

- ✓ All AI calls via GonkaRouter
- ✓ Two families, distinct receipts
- ✓ A request ID per step
- ✓ The rule printed on screen

5. MOTIVATION AND CHALLENGES

We measured first. Then a model went dark.

The benchmark killed our first design. Then a model family vanished.

5 SEPTEMBER, THE NIGHT BEFORE

One of our reader families went offline.
The queue seated the other two.

1 line

changed in production. The queue and the rule did not.
`apps/server/gateway/models.ts`

30-QUESTION EVALUATION SET · RUN TWICE THROUGH THE DEPLOYED QUEUE

Of the 20 planted defects, 5 came back Unverified and 1 came back Clear.

6. COMMERCIALISATION AND BUSINESS MODEL

We charge per question checked, **not per token.**

Priced by questions checked, so the educator never sees a model bill.
